PRIMARY BUSINESS ACTOR	user	
PRIMARY SYSTEM ACTOR	NONE	
OTHER PARTICIPATING ACTORS:	• NONE	
OTHER INTERESTED STAKEHOLDERS:	• NONE	
DESCRIPTION:	This use case describes an occurrence where a user of the system wants to login to the system. This use case is initiated when the user requests to login the system. The user must provide the username and password that they generated or created when they were first added to the system. Once they've provided these details the system will validate their login credentials to the login credentials that are stored in the user entity in the database as well as verify the access level that the user has to the system. After the user's login credentials are successfully verified by the system, the system will now grant the user access to the system according to the access level that the specific user has.	
PRE-CONDITION:	The user must be registered on the system and have an existing username and password	
TRIGGER:	The user wants to login to the system
